Study program

Education and training in the health professions ...

is an important mission for the future - whether it takes place in a lecture hall, a seminar room, a learning lab, at the bedside or in home and community-based healthcare.

In demand are personalities,

- who have a sound education, preferably clinical experience, and an enthusiasm for their own health profession;
- who want to be involved in responding to current and future challenges in the qualification of the health professions;
- who want to contribute to systematically expanding existing knowledge about teaching and learning in the health professions.

Modular, flexible and internationally compatible ...

the Master's programme was designed to prepare students for taking on challenging pedagogical roles and tasks in the education and training of health professionals.

The programme includes

- fundamentals of teaching and learning in the health professions;
- Educational science, methodology and research in health professions education
- innovative forms of teaching and learning for the various pedagogical fields of application;
- practical experience in the education and training of the health professions.

Competent for teaching in the health professions ...

and for the reflected application of subject-specific and educational knowledge, there are many interesting opportunities after the successful completion of the Master's programme.

Graduates can work as

- Lecturers in vocational and university education and training for the health professions;
- Instructors at practical learning sites for the promotion of clinical competence development;
- Experts in educational institutions, educational administration or educational policy.

Particularly qualified graduates can pursue a doctorate and thus also embark on an academic career in health professions education.
